

MONITORING & RESEARCH

For 30 years, EWCP **Researchers and Monitors** have followed wolf packs across Ethiopia's Afroalpine highlands. Patient field observation, enriched by satellite collars, camera traps and genetic tools reveals threats, diseases, and resilience. This knowledge guides conservation, protecting the world's rarest canid and the ecosystems people depend on.

SUPPORT THIS PROJECT TO:

- Use technology to track wolves, biodiversity, and threats
- Understand diseases better
- Secure long-term population monitoring
- Renew high-altitude field equipment
- Fund scholarships for Ethiopian students
